Security Assessment – Findings Summary for Propel Platform (KITS) Web Application

Background

InvenTech Info Solutions Pvt Ltd. (also referred as, "**Inventech"** or "client") engaged **Talakunchi Networks Pvt. Ltd.** (also referred as "**Talakunchi**" or "service provider") on 09-Jan-2025 to perform a comprehensive security review for Application components maintained by InvenTech Info Solutions Pvt Ltd.

The security review assessment was based on the scope agreed. The details mentioned below are a summary of our consolidated report submitted on 23-Jan-2025. The Summary provided herein is subject to scope limitations, scope exclusions and assumptions provided under the project scope and the Report. The attached 'Disclaimer and Notice to Reader' should be read along with the Summary and forms part of the Summary.

Summary

The below-mentioned target in scope has undergone a security audit and below is the status of all identified vulnerabilities. The contents audited were based on the target detailed mentioned below.

Assessment Name	Web Application Penetration Testing			**Assessment Date**		**16-Jan-2025**
				Re-Assessment Date		**23-Jan-2025**
Scope	**URL**			**Application Name**		
	Tested URL- http://14.97.141.54:776/ Production Domain - propel.eitbt.karnataka.gov.in			Propel Platform (KITS)		
Result Summary	**High**	**Medium**	**Low**	**Info**	**Business Exception**	**Total**
Total Vulnerabilities	1	1	13	1	0	16
Open Vulnerabilities	0	0	0	1	1	02

Auditor's Remark:

It is to certify that **Talakunchi Networks Pvt. Ltd.** have successfully performed Web Application Penetration Testing audit on the Propel Platform (KITS) Web Application and identified vulnerabilities have been closed without one exception to our satisfaction and the same has been reviewed.

Talakunchi Networks Pvt Ltd
505,Topiwala Center, Off S.V.Road ,Goregaon (West), Mumbai 400104. India

The initial assessment conducted was one-time activity and follow-up validations were performed to confirm closure of open vulnerabilities only. All observations identified in this report have been discussed with the concerned team.

Risk Classification

- The observations have been classified into four categories based on their risk ratings.
- The risk ratings are subjective derived based on the ease of exploitability, business impact of the findings, proposed mitigations and judgment of Talakunchi team who performed this review.

Risk Rating	Description
High	High level vulnerabilities are categorized as the dangerous, which put a site at major risk for hacking and data theft.
Medium	Medium level vulnerabilities are generally caused by server misconfiguration and site-coding flaws, which facilitate server disruption and directory intrusion
Low	Low Level Vulnerabilities are generally caused by server misconfiguration, or directory path disclosures, etc...

Assessment Limitations

- The initial assessment conducted was a one-time activity and follow-up validations were performed to confirm closure of open vulnerabilities only. All observations identified in this report have been discussed with the concerned client's team.
- The tests were performed at a point in time; therefore, it does not comment on the environment prior and after the point of time of the review/test.
- This document is for information only and reader should exercise their own due diligence before making any decision.

Disclaimer and Notice to Reader:

- This Summary has been prepared exclusively by Talakunchi for InvenTech Info Solutions Pvt Ltd. ("Client") based on the terms of the project scope referred above.
- We have not performed an audit and the Summary does not express an opinion or any other form of assurance or recommendation. Further, comments in our Summary are not intended, nor should they be interpreted to be legal advice or opinion.
- The information covered in the Summary is not intended to address the circumstances of any particular individual or entity and no recipient should act on the contents herein without appropriate professional advice.
- Performance of our work was based on information and explanations given to us by the Client. Neither Talakunchi nor any of its partners, directors or employees undertake responsibility in any way whatsoever to any person in respect of errors in this Summary, arising from incorrect information provided by the Client.
- In accordance with its policy, Talakunchi advises that neither it nor any of its partner, director or employee undertakes any responsibility arising in any way whatsoever, to any person other than Client in respect of the matters dealt with in this Summary, including any errors or omissions therein, arising through negligence or otherwise, howsoever caused.
- In connection with our Summary or any part thereof, Talakunchi does not owe duty of care (whether in contract or in tort or under statute or otherwise) to any person or party to whom the Summary is circulated to and Talakunchi shall not be liable to any party who uses or relies on this Summary.
- Thus, disclaims all responsibility or liability for any costs, damages, losses, liabilities, expenses incurred by such third party arising out of or in connection with the Summary or any part thereof. The scope of security testing is restricted to the number of IT assets reflected in the 'Detailed Scope' section and type of activities mentioned in this letter.
- The security testing does not constitute tests that create or contribute to a "denial of service" and that are "brute force" in nature. It should also be noted that risk mitigation measures cannot overcome attacks that are "denial of service" and that are "brute force" in nature.
- The assessments and tests carried out as part of the security testing is to evaluate the existence and adequacy of security controls in place. However, this does not guarantee the effectiveness of the controls, prior, after or during the period of testing. The responsibility of the IT assets performance is solely with the management of the Client.
- Security testing on an application or host or IP address is carried at a point of time and did not, in any way warrant or provide absolute assurance that the target application/host is, or will be, protected and impervious to all vulnerabilities, focused attacks by external/ internal entities, viruses, worms, trojans, bugs, malware, spyware or the like. Further, issues identified should be subjected to a through "Root Cause Analysis" and holistic mitigation measures incorporated for remediation completeness. Consequently, not all issues can be identified within the test window and documentation shall include only the findings identified during the testing period.

- The results of security testing are subject to the existing IT environment during the testing time window. Any changes made to the systems or underlying controls, any process related changes, any changes in the security policy or procedures, adoption of any new technology or a new service line may introduce new information security risks, which shall make our findings and recommendations invalid. The results shall be limited by the scope of work defined in this letter and thus recipient should not use or interpret the findings or recommendations of this security testing for taking business decisions including decisions of strategic, financial, economic or marketing nature.
- Recommendations and or mitigation measures, if not appropriately applied and tested could lead to other potential attacks to the host or its surrounding environment and security incidents may occur despite technical vulnerabilities being addressed, since the incidents may occur due to multiple reasons.
- By reading the Summary, the reader of the Summary shall be deemed to have accepted the terms mentioned herein above.
- This certificate is valid till no additional changes in the dynamic system or one year from date of issue whichever is earlier.
